LPG PHILIPPINES FORUM 2017

THE FUTURE OF LPG IN THE PHILIPPINES

27 - 28 April 2017 | SMX AURA, MANILA, PHILIPPINES

LPG Consumption in the Philippines has grown over the past couple of years, but specific problems still plague the Philippines market. The LPG PHILIPPINES FORUM, since 2011, has been the voice of the industry in the Philippines, addressing specific problems and delving into specific opportunities to bring the latest developments in LPG from around the world to the Philippines.

2017 will be no different.

With a new administration, global supply changes and new technologies coming into the market, the LPG industry in the Philippines will be affected, and since the last forum in 2015, it was agreed that the industry need to be forward looking and continue to provide momentum for the LPG industry to continue to grow. More attention needs to be placed on the LPG industry to resolve key challenges and exploit upcoming opportunities.

The LPG PHILIPPINES FORUM is a continuation of our efforts to provide a valuable platform for the LPG industry and government stakeholders in the Philippines to meet, discuss, debate and address key issues that the industry is facing.

This year's theme will center around Building a Sustainable Future with LPG, and will cover discussions on policy directions for LPG, the building of infrastructure for LPG distribution, introducing new uses for LPG especially in power generation, and take a crack at trying to revive autogas use. Local opinions will be augmented with international case studies to deliver insights and learning for the LPG industry.

LPG PHILIPPINES FORUM 2017
